

Homework 3 Metrics

Introduction

This homework aims to make you familiar with common metrics in machine learning.

You are required to finish four functions in `homework.py`:

- `binary_classification_metrics`
- `multiclass_classification_metrics`
- `multilabel_classification_metrics`
- `ranking_metrics`

All the scores have implementation in [sklearn.metrics](#), which is the ground-truth. Feel free to read their codes.

In your implementation, you can also use `built-in modules` of Python and `Numpy`.

Submission and Scoring

Directly upload the `homework.py` after finishing the codes.
